

Notice to users of the Nikon D80 camera.

The Quantum D12w-R adapter functions in all modes with this camera.

However, due to a change in Nikon's camera design Turbo batteries cannot be used to powers **both** the camera and Qflash at the same time. It is recommended that only the Qflash be powered with a Turbo.

Quantum anticipates that we will be able to find a solution for you with an upgrade to your D12w-R that allows dual power for camera and flash. If you require this feature, a free upgrade will be provided. Kindly check the Quantum website approximately March '07 for an upgrade notice.

Thank you,
QUANTUM INSTRUMENTS INC.
