

# QUANTUM

## Instructions for cable CM5+

The instructions depend upon which Turbo and flash models you have.

### **Turbo Z Battery (QTZ)**

The Turbo Z will supply high voltage for flash and low voltage for computer functions. Internal AA batteries are not required in the flash. Set the flash power switch to OFF when powering these flashes with the Turbo Z and CM5+ cable.

### **Turbo Battery (QTB)**

For 54MZ-3, follow the instructions above. The Turbo will perform flawlessly.

For 50MZ-5 and 70MZ-4/5, the Turbo and CM5+ will work properly until the Turbo has just two remaining "fuel gauge" indicators lit. At this point these flashes will stop working due to the low voltage requirements of their computer circuits. Turbo Battery capacity will be approximately 100-150 flashes (approximately equivalent to the QTZ above).
