

QUANTUM FLASH TRIGGER SWITCH

INSTRUCTIONS

Model FTS Flash Trigger Switch fires a flash unit through the Calcu-Flash flash cord (CFC). It is used when a Calcu-Flash or Calcu-Flash II, due to electronic incompatibility, will not trigger a particular brand of flash unit in the "cord" mode. It can also be used in conjunction with Calcu-Flash-S (and a separately purchased CFC cord) in order to operate the meter in the "cord" rather than "cordless" mode.

Operation: Plug the flash cord into the socket in the back of the FTS switch, and connect the cord to the flash unit. Move to the measuring position, holding the flash meter and Flash Trigger Switch. Operate the meter as in the "cordless" mode and trigger the flash with the FTS switch.
