

QUANTUM DIFFUSER KIT QF64

INSTRUCTIONS

The QF64 Diffuser kit consists of a black retaining ring and two translucent diffusing disks.

For a softer lighting effect, use the two diffusing disks supplied. For special color lighting effects, a colored gel can be added. The optional QF66 accessory is an assortment of 7 colored gels pre-cut to fit the Qflash.

To add a colored gel, remove the two diffusing disks from the retaining ring. Insert a pre-cut gel between the disks or cut a colored gel (not supplied) the same size as the diffusion disks.

Insert the disk assembly inside the retaining ring. Snap the diffuser onto the reflector. Diffusing filters will give an F/stop reduction.
