

QUANTUM WIDE ANGLE DIFFUSER KIT QF67

INSTRUCTIONS

The QF67 Wide Angle Diffuser kit consists of a black retaining ring and a wide angle diffuser.

For a softer lighting effect, use one of the diffusing disks included with the Qflash. For special color lighting effects, a colored gel can be added. The optional QF66 accessory is an assortment of 7 colored gels pre-cut to fit the Qflash.

To add a colored gel, place a pre-cut gel between the disk and wide angle diffuser or cut a colored gel (not supplied) the same size as the diffusion disk.

Insert the disk assembly inside the retaining ring. Snap the diffuser onto the reflector. Diffusing filters will give an F/stop in reduction.
