

# QUANTUM QB-22

## INSTRUCTIONS

---

The QB-22 extends the working distance between the Quantum Battery and any of the modules available for it. Insert the plug end of the QB-22 into one of the Quantum Battery flash outputs. Plug the power module into the socket (other) end of the QB-22.

### GRIPPER PLUG MOUNTING INSTRUCTIONS

Attached to one end of the QB-22 is Quantum's gripper plug. One of the important features of this plug is that it can be locked onto the battery! This is achieved by a simple mechanical process. The gripper plug eliminates the possibility of the plug becoming disconnected from the battery - at the worst possible time.

#### HOW TO USE:

1. Before inserting the plug into the Quantum Battery, loosen the shell until the locking fingers just start to become hidden under the shell. Insert the plug into the battery output jack until it is firmly seated. If you do not loosen the shell first, the plug will be difficult to insert into the battery. (Fig. 1)
2. While holding the plug body, tighten the shell. It is not necessary to over-tighten the plug. Once you begin to feel resistance when tightening, you'll only need to tighten it 1/8 of a turn more to lock the plug onto the Quantum Battery. (Fig. 2)
3. To release the plug, loosen the shell about one turn and the plug can be disconnected from the battery.
